

### **1. How your Project will benefit from React Native**

- My project is about interior designing service and with the use of React-Native, I was able to create an app where the designer and the client can easily communicate back and forth.

### **2. Expected List of React Components**

- I have implemented the card component mostly to display information and photos, the swipeRight in order to perform an action like deletion, the panGestures to perform an action based on the gestures made. I also used the touchableOpacity component in order to customize the appearance of the buttons.

### **3. Team responsibilities**

I am working on my own project
